Enter ABV Supplied User Name & Password (All default passwords are: 000000). Enter Code displayed and press "Login"

There are 2 ABV Registered Users for each Customer, so you must sign in for each and setup a different password for each if you wish to be able to limit access to Basic users.

Customer setup of "Role" aka Permissions

Select USER tab, then Select User Management tab on left, then Select Add

When ABV registers DVRs for Professional CMS Server Hosting we setup a User Account for each customer. We then setup 2 User Names for each of the companies, one with full Admin privileges and one with Basic privilege. Account ______A is for Admin privileges

Account ______B is for Basic privileges unless you provided us a User Name.

Non-Advertised Features of CMS Server

ABV does not advertise features the product cannot provide at the time of the advertisement. There are additional features of the product that are not fully developed at this time. While the manufacturer may work to develop: Voice Intercom, Remote Video Storage, Remote Video Download, Local Video Storage, Local Video Playback and remote Device Upgrade as well as other features, and mention them in CMS related software and documentation, it must be emphasized that they are not advertised features, their development is not completed nor is there any assurance offered they will be completed, so it would be unwise to base a investment decision on any of those possible system features.
